

# **SINE Isochronic Entrainer**

## **macOS Help**

The Mac version of SINE is still experimental and nowhere near as tested as the Windows and GNU/Linux versions, therefore, issues can occur.

### **How do I install SINE?**

Drag the icon into the Applications drawer.

You can install SINE and SINE Editor separately if you want.

### **I can't open SINE, the system tells me that the app is from an unknown source!**

If this happens, you have to go to Preferences > Security & Privacy > Generals and click “Open anyway” where it tells you that you tried to open SINE.

After this first time, you will be able to open SINE normally.

### **I found an issue. Where can I report it?**

Send an email to [info@fdossena.com](mailto:info@fdossena.com), or report the issue on [Github](#).
